

1.Lima Project Overview.

Farming is the most important contribution to Kenyan economy with a significance of 25% of the GDP (gross domestic product). Also, the sector provides 65% of the total country's exports giving the population 18% of the total formal employment. Lima cuts across to help farmers make better produces. Some of the Limas' benefits include;

Climate Change

Nowadays the climate change is unpredictable as far as the farmers' consent is concerned. Lima provides insight to help farmers with the future planning

Diseases & Pests.

With storage services we have and the types of what crops to be stored, pests are able to break through thus affecting not only crops only but human beings also. Lima ensures all farmers and interested personnel are linked to pest control bodies to help protect their farm produce.

Lack of Information

Farming being one of the biggest sources of income in Kenya, Lima ensures all the farmers have the most updated content (information) e.g farming techniques, ready markets, Farm produce seasons etc as far as crop production is concerned.

Soil Nutrients.

Majority of the farmers are unable to tell the types of soils to grow their produce i.e soil humidity and richness. Lima provides insights also in terms of soil texture, moisture and humidity. This way farmers are able to know the types of plants to grow

2. Dean Elimu Online Bootcamp

I'd like to thank Dean Elimu Online for the opportunity given as a code enthusiast. It's with great honour. With dean, I got a guide in building my career and thus able to explore with the help of skilled moderators, facilitators and not to forget the big team of developers during this Journey.

Despite the few obstacles, time to mention a few, I'd wish for longer bootcamps, more time to learn from the experienced instructors and opportunity to further grow as a developer.

I'd also wish for an opportunity to work with the Dean team helping the community in terms of technology gap in the streets. This is so by transforming the community by providing solutions to their day to day challenges e.g garbage collection to mention a few.

Last but not Least, I'd like to thank the KTC and DEAN fraternity for changing the lives of the Youth. Providing as far as technology gap is concerned. I look forward to keeping grabbing the opportunities offered in the coming days.

Asanteni Sana!

Regards Obiero Felix.
